4. Q&A
5. AI NEWS

# INTRODUCTION

As we continue to innovate and leverage artificial intelligence (AI) to improve operational efficiency of our teams, AI assistant prompt versioning and management becomes paramount.

Effective AI assistant prompt management ensures that our AI assistants remain accurate, relevant, and aligned with our business goals.

## **What you will learn from this session:**

This session will outline the importance of AI assistant prompt versioning and management and also showcase the solution that Drinkizz has adopted to version control and manage its AI assistant prompts.

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## ENHANCING AI ASSISTANT PERFORMANCE

Prompt engineering involves the strategic formulation of instructions to AI models, which significantly impacts their output quality.

By providing specific and clear prompts, user can guide AI to produce more accurate and contextually relevant responses.

This precision is essential for applications such as document analysis, sales data analysis, key valued business objects identification, information extraction from unclear document, content generation, where the quality of output directly affects user experience and decision-making processes.

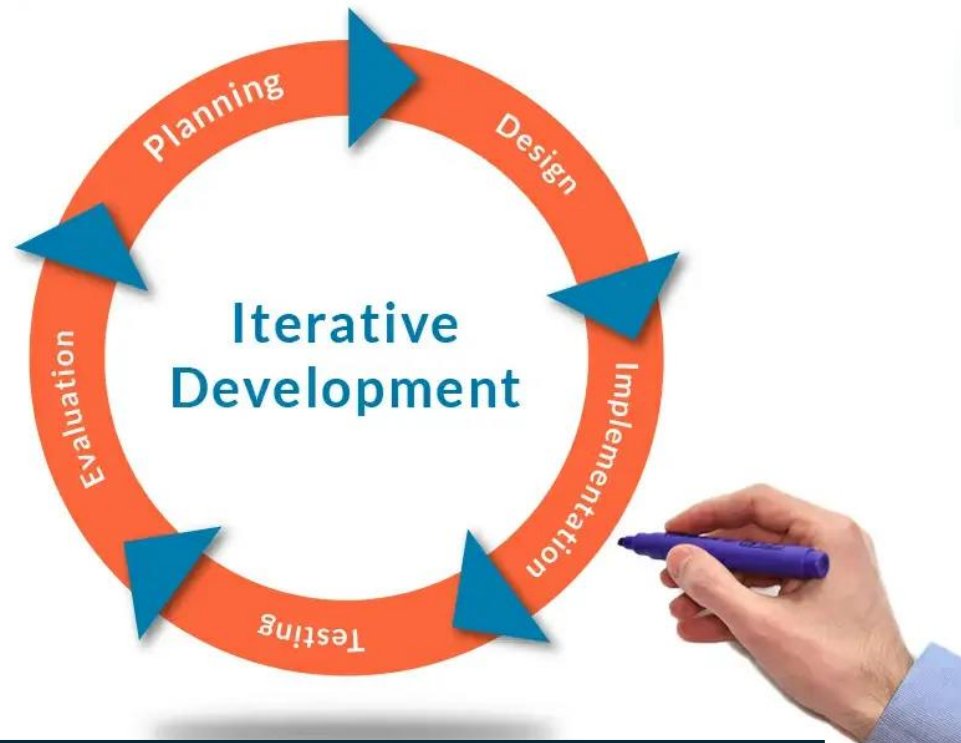

*Effective versioning and management of AI assistant prompts are crucial to enhancing the performance of the AI assistant. By maintaining a well-structured prompt management system, we can track changes, improvements, and optimizations over time, ensuring that the AI assistant delivers accurate and relevant responses.*

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## ITERATIVE DEVELOPMENT

The process of prompt versioning allows for iterative improvements. As users interact with AI, they can refine prompts based on feedback and performance metrics. This continuous enhancement leads to better alignment of AI responses with user expectations and operational goals. For Drinkizz, maintaining a repository of prompt versions can facilitate experimentation and optimization, ensuring that the AI assistant evolves alongside user needs.

*AI assistant prompts are not static; they evolve through iterative development. Each version brings improvements based on user feedback, performance analysis, and new insights. Version control allows for systematic updates, testing, and deployment of new prompt versions, facilitating continuous improvement.*

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## CONTEXTUAL ADAPTABILITY

Different contexts require tailored prompts. By managing various versions of prompts, we ensure that our AI assistants can adapt to specific tasks or user requirements. For instance, prompts can be designed to extract hidden information from unclear documents or summarize heavy documents, making the AI assistant versatile across different applications. This adaptability is vital for businesses aiming to leverage AI for diverse operational challenges.

*As business contexts change, AI prompts must adapt to new information and scenarios. Versioning enables us to tailor prompts to specific contexts, ensuring that the AI assistant can handle a variety of situations effectively. This adaptability is key to maintaining the relevance and accuracy of AI interactions.*

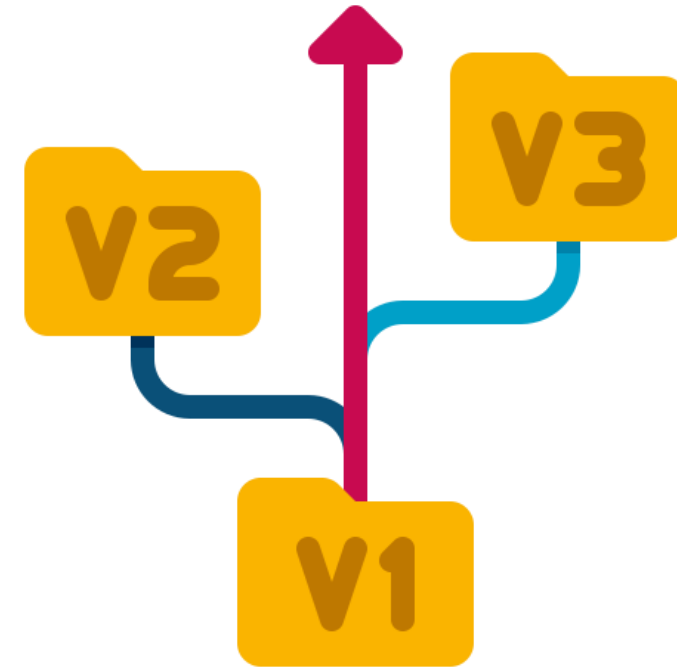

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## VERSIONING

Version control is the systematic process of tracking and managing different versions of prompts.

This is essential to maintain a history of changes, allowing teams to revert to previous versions if necessary.

For Drinkizz, this means that if a prompt version is not performing well, the team can easily revert to a more effective version, ensuring minimal disruption to service quality and improving productivity and efficiency.

*Versioning is the practice of assigning unique identifiers to different iterations of AI prompts. It helps in keeping track of changes, understanding the evolution of prompts, and reverting to previous versions if necessary. This systematic approach minimizes errors and enhances the reliability of the AI assistant.*

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## MANAGEMENT

Effective management of prompts involves organizing and categorizing them based on their purpose, effectiveness, and context of use. This structured approach allows teams to quickly access and deploy the most suitable prompts for specific scenarios. For Drinkizz, a well-managed prompt library can streamline workflows, reduce response times, and enhance overall productivity.

*Effective management of prompts is key to leveraging the full potential of our AI assistants. By organizing and categorizing prompts efficiently, we can ensure to deploy the best prompts for every scenario, leading to better performance and higher productivity.*

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## SECURITY

Managing AI assistant prompts securely is critical to protect sensitive information and maintain the integrity of the AI system.

At Drinkizz, we store our AI assistant prompts in the Knack database, which provides robust security features to safeguard our data.

With Knack we can control access to prompts, ensuring only authorized personnel can update or retrieve prompts, and monitoring changes to prevent unauthorized modifications.

This security framework helps mitigate risks associated with data breaches or misuse of AI capabilities.

*Securing our AI assistant prompts is not just about protecting data; it's about maintaining the trust and reliability of our AI assistants. By using Knack database and implementing controlled access, we ensure that our prompts are secure, mitigating the risks of data breaches and*

# 1. IMPORTANCE OF VERSIONING AND MANAGING AI ASSISTANT PROMPTS

## GOVERNANCE

Governance involves setting policies and procedures for the proper use and management of AI assistant prompts.

At Drinkizz, governance is maintained through a structured approach using the Knack database.

This includes defining roles and responsibilities, establishing guidelines for prompt creation and modification, and ensuring compliance with internal standards.

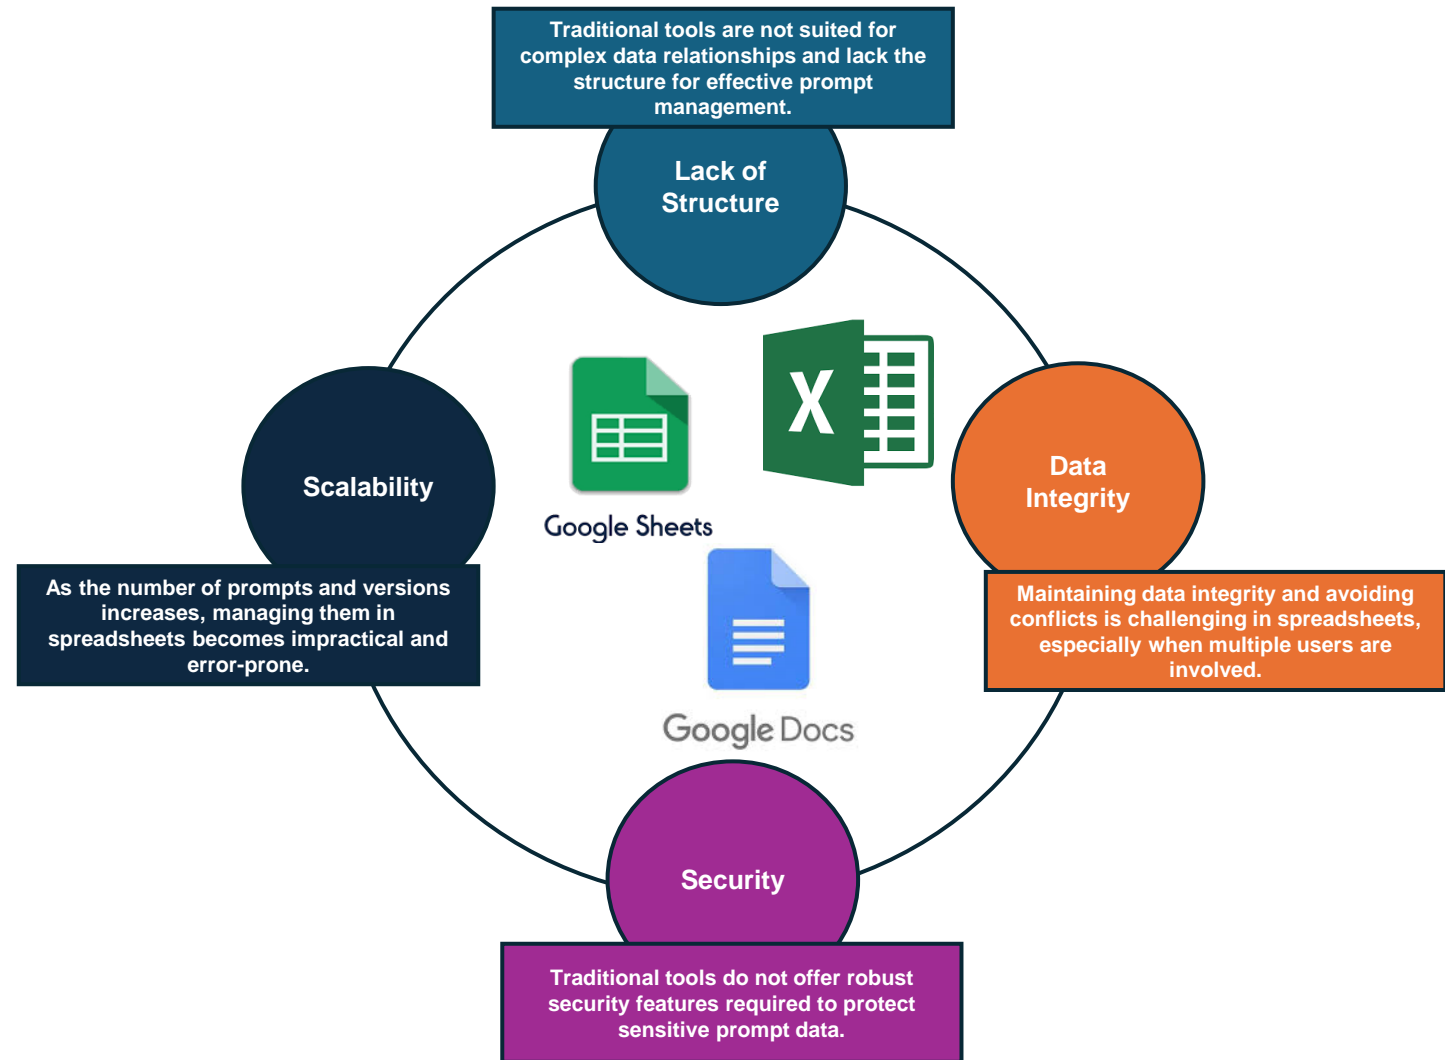

We regularly review our prompt performance, audits of prompt usage, and ensuring that prompt updates align with business objectives and regulatory requirements.

*Effective governance is essential for managing AI assistant prompts. By setting clear policies, defining roles and responsibilities, and regularly reviewing our processes.*

## 2. THE PITFALLS OF USING TRADITIONAL TOOLS

Using spreadsheets or documents like Excel, Google Docs in google drive for versioning and management AI assistant prompts can be a headache and a big challenge.

# 3. VERSIONING AND MANAGING AI ASSISTANT PROMPTS AT DRINKIZZ USING KNACK DATABASE

## Objective

Implement a system that can manage prompts used to interact with GPTs created in chatGPT platform as AI assistants and the results obtained.

Manages different versions of AI assistants (GPTs), taking into account the data used for their training.

The system facilitates collaboration between team members, sharing of prompts and tracking the improvement of prompt quality over time.

**At Drinkizz, we use Knack to manage version control and AI prompt management because it provides a structured, scalable, and secure platform. Knack's database capabilities ensure that our prompts are organized systematically, changes are tracked accurately, and access is controlled effectively. This approach helps us maintain high-quality AI assistant performance and adapt to evolving user needs efficiently.**

-  **Governance**

# 3. VERSIONING AND MANAGING AI ASSISTANT PROMPTS AT DRINKIZZ USING KNACK DATABASE

## Specification

### Prompt Management

**Prompts Table** : Contains basic information about prompts, including the creation date and the author. For example, a prompt could be "Writing a LinkedIn post." This table provides a brief description of the general objective of the prompt.

**Prompt Text Table** : Stores the specific texts of the prompts used to interact with the AI. Each prompt text is associated with a prompt from the Prompts Table. This relationship includes an attribute specifying the prompt text's objective (e.g., "for the month of June"). An additional attribute indicates whether the prompt text is usable or deprecated. The author of the prompt text is also recorded.

### Execution Management

**Executions Table**: Records the results of prompt text executions, including the execution date, the documents used as input, and the execution result. The author of the execution and an analysis of the prompt quality (strengths and weaknesses) are also stored.

### User Management

**Users Table**: References authors and users present in other tables. This table contains basic information such as name and email address. A user role (administrator, editor, reader) can be added to manage permissions.

**Prompt Sharing**: Users can share prompts with other team members. A sharing attribute can indicate which users or groups the prompt is shared with.

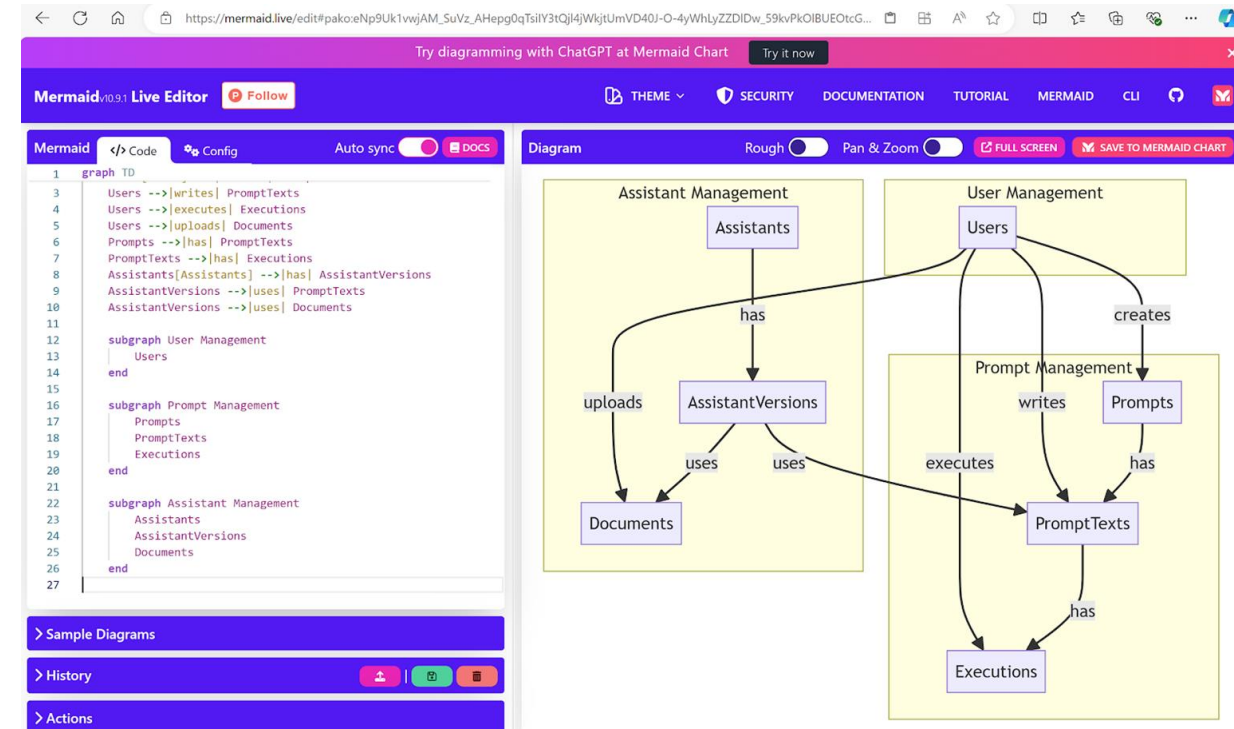

### AI Assistant Management

**Assistants Table**: Contains basic information about AI assistants, including the creation date and the author. For example, an assistant might have the objective "Writing social media content." This table provides a brief description of the assistant's general objective.

**Assistant Versions Table**: Stores different versions of AI assistants. Each version is associated with an assistant from the Assistants Table and includes the list of prompt texts used for training as well as the list of documents (in the form of URLs) used for training. The same assistant can have multiple versions with different training prompts and documents.

### Document Management

**Documents Table**: Stores documents used for training assistants and executing prompts in the form of URLs to storage locations. Documents can be shared among different users and assistant versions.

## TRAIDA AI & Data Solutions

In this sphere, you will find best practices for building your minimum viable technical architecture to scale AI. You will need to clarify your data management systems, likely using knowledge graph technology, and possibly a NoCode database depending on the complexity of your business. To analyze needs and conduct a phased transformation, we have defined the TRAIIDA framework (Transformative AI and Data Solutions) which contains essential knowledge both technically and in terms of governance.

The choices made for the architecture must then be aligned with your business objectives. This is a delicate but essential management task to remain competitive with AI.

ENGAGE META

TRAIDA | AI KNOWLEDGE | MINDSET | AI and NoCode | Resources | Contact

## AI KNOWLEDGE Accumulation

In this sphere, you will find practices that promote the transformation of tacit knowledge into explicit knowledge. This transformation is strategic for being able to train your AI systems with maximum value. It essentially involves documenting the know-how of your operators. This work represents a significant investment, but the return on investment, thanks to AI, is immediate.

The more you formalize and accumulate knowledge over time, the more you can create AI assistants that are available on demand, as well as integrate them into your operational processes to enhance the overall performance of the company.

## MINDSET Critical Thinking

In this sphere, you will find key principles to help raise awareness that AI necessitates a profound change in the relationship between humans and work. With the increasing intelligence of systems, it is no longer sufficient to simply execute standard and repetitive processes at work. Such processes will simply be automated by AI. Everyone must then formalize their knowledge clearly and precisely.

Humans, therefore, need to enhance their work capabilities through innovation, creativity, critical thinking, and sharing. It is essential to break out of the rat race and cultivate a culture of intrapreneurship and interpreneurship. Without the right mindset at work, AI will replace positions where the added value becomes low.

## AI & NoCode Exponential Gains

### The AI and NoCode case of the company Drinkizz

The Drinkizz startup has been using NoCode and AI since its launch in 2019. Pierre Bonnet, founder of the Engage-Meta community is also an investor in this company and a co-founder. The IT setup is based on a NoCode Knack database, automation with the software Make, and the use of ChatGPT, along with other NoCode tools to cover all the needs of the activity (PowerBI, Woo commerce, ...)

# NEW CATALOG OF SERVICES

ENGAGE-META.COM

# TRAIDA Masterclass

This masterclass reviews all the principles of the TRAIDA (Transformative AI and Data Solutions) framework in half a day. It provides you with a comprehensive overview of the impact of AI on organizing the technical architecture of your information system. The inclusion of NoCode opens up additional opportunities for automation and productivity. This masterclass is open to a broad audience, both technical and business-oriented, with no participant limit. The presentation is delivered in a seminar format, meaning it's academic. The time allocated for questions and answers varies depending on the number of participants. Ultimately, this masterclass is an excellent educational tool to provide you and your teams with the general knowledge needed to understand and engage with AI, data management, and NoCode. The slides from this masterclass are freely accessible on the Engage-Meta community website.

# TRAIDA Workshop

Following the TRAIDA masterclass, we propose organizing a half-day workshop with a limited group of participants within your company to address questions specific to your context. Our multidisciplinary approach allows us to tackle technical, business, governance, and financial issues related to the impact of AI, associated data management, and NoCode. To help you prepare for this workshop, we will provide you with some questions in advance for you to start considering. For large organizations, it is recommended to organize several workshops in this format to extend the discussions to a broader population of teams. Generally, a workshop should not involve more than 10 participants.

- 1 **Motion (M)**: How can we leverage AI to dynamically enhance our decision-making processes and operational efficiency?
- 2 **Motion (M)**: What specific areas of our operations can benefit most from AI-driven automation?
- 3 **Motion (M)**: How can NoCode tools be integrated to streamline our workflow and reduce development time?
- 4 **Motion (M)**: How can we ensure our AI implementations are adaptable and can evolve with our business needs?

# TRAIDA At Scale

Based on the results of the previous stages (TRAIDA Masterclass, TRAIDA Workshop, and TRAIDA Initial Engagement), we have sufficient information to advise you on an approach to scale up the use of AI, NoCode, and data management in your company. We will then review all the technical, governance, and business cards of the TRAIDA framework to establish a minimum viable architecture to gradually scale up your various use cases.

We will assist you in choosing technical solutions and implementations, according to your needs and the planning of resource engagement. We will help you establish implementation and maintenance budgets, as well as expected returns on investment.

# MASTERING NO-CODE AND AI

Master the fundamentals of No-code and AI with a hands-on **4-hour course** designed to help you launch and scale your business.

*"Featuring a real-world case study from startup Drinkizz in the beverage industry."*

## No code and AI Training Session

This course shares Drinkizz's journey in leveraging No-code and AI, showcasing its power even for small startups.

It underlines how No-code and AI reduce IT expenses while maintaining agility, emphasizing the importance of methodology and data management.

We demonstrate that with a strategic approach, these tools can be pivotal for businesses of any size, fostering growth and allowing for continuous innovation and stability.

# OUR OFFERS

## COURSE CONTENT

**9 sections - Total duration: 4 h**

### SECTION 1

INTRODUCTION TO NO-CODE TOOLS.

### SECTION 2

BUILD A KNACK APP (NO-CODE DATABASE).

### SECTION 3

AI USED FOR DATA MODELING.

### SECTION 4

DATA INGESTION WITH MAKE.

### SECTION 5

DATA BACKUP WITH SIMPLE BACKUP AND GOOGLE DRIVE.

### SECTION 6

DATA REPORTING AND ANALYSIS WITH CHATGPT-4.

### SECTION 7

CREATE AN AI CHATBOT WITH CHATBASE.

### SECTION 8

QUIZZES TO TEST YOUR UNDERSTANDING OF KEY KNOWLEDGE.

### SECTION 9

QUESTIONS & ANSWERS.

# OUR OFFERS

BOOST YOUR BUSINESS  
WITH THE NO-CODE  
AND AI ADVISORY  
STARTER-PACK

## DAY 1

We take the time to understand your context and your needs to support you in the most relevant way during the 5 days.

Considering your context and stakes. Analysis of your documents necessary for knowledge acquisition - First discussion about No-Code with you.

## DAY 2

We explain how No-Code and AI tools will help you and what method to use for their implementation (data, glossary, codification, processes, security, performance, back-up, maintenance).

Advice on the use of No-Code and AI tools in your context and justification of our choices.

## DAY 3

The No-Code database is created with a maximum of about ten tables. We can also load real data from your CSV and Excel files and configure your users' profiles security.

Setting up the No-Code database with the use of ChatGPT as a modeling aid.

## DAY 4

The other No-Code tools are installed and demonstrated in your context. Five integration processes are set up between a maximum of two systems.

Implementation of other No-Code tools: data backup, system integration, AI chatbot, email marketing, data analysis with ChatGPT and PowerBI.

## DAY 5

We provide you with the financial details including the cost of the No-Code and AI tools as well as the skills needed for their implementation

Financial study with an estimate of the costs of No-Code and AI tools at the launch of your operations and for scaling up - Conclusion of the intervention.
